

Sophos Enduser Data Suite

Encryption, DLP, endpoint and mobile protection—
complete data protection without complexity

- ▶ Combines data, endpoint, mobile and email protection—all in one license
- ▶ Integrates full-disk and email encryption
- ▶ Consistent DLP policies across endpoint and email
- ▶ Complete endpoint threat protection that includes client firewall; web filtering; application, device, data control; and patch assessment
- ▶ Mobile device management for all your iPhones, iPads, Android devices and more
- ▶ Switching and deployment made easy
- ▶ Backed by our SophosLabs global security experts and the best support in the industry

You're safer in our world because our Enduser Data Suite combines DLP and encryption with our email, endpoint and data protection. It makes secure data sharing easy with our full-disk, and email encryption. And, it stops accidental data loss with sensitive data scanning that's built into our desktop antivirus and email protection. No separate deployment needed.

Because it's all from Sophos, it works better together. And it's so simple to use, you'll actually turn it on—delivering the best protection that saves you time and money.

Ideal for . . .

Sophos Enduser Data Suite is ideal for organizations of any size needing complete data protection that's easy to manage.

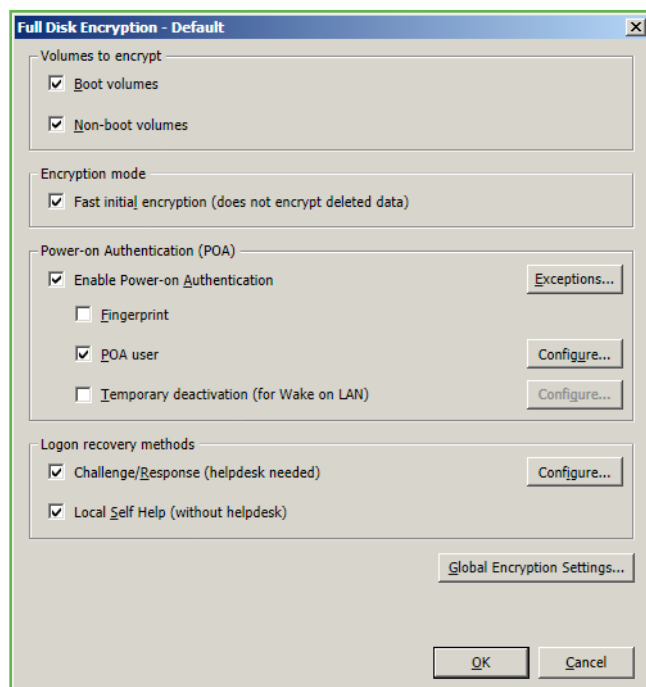

All in one license

One license includes complete data and threat protection across all platforms, plus 24/7 support and free updates. Your Sophos Enduser Data Suite license includes:

Encryption: Proven and certified

Your confidential data needs protection, and you've got to prove it's protected to regulators. Our encryption stops data breaches and lets your users securely access, share and store data. And, it's managed from the same console as our antivirus.

A simple policy for encrypting computers.

Protect your data with full-disk and encryption technology.

Fast initial encryption algorithms save you time when you first encrypt your computer's hard drives.

We generate keys from passwords, reducing the risk of storing enciphering keys on disk.

Quickly and easily implement your data security policy with our easy-to-use configuration wizard.

Install directly to individual computers or automatically to all computers across your network.

Central management of encryption from our Endpoint console for Windows OS.

Endpoint: Block threats, not productivity

We give you everything you need to stop malware and protect your data in one console and agent. It's fast, effective and complete security for your users, wherever they are.

Fast antivirus scanning across Windows, Mac, Linux, UNIX and virtual platforms.

Automatically identifies and cleans new malware threats and controls applications, devices, data and network access.

Centrally managed from one console including patch assessment, web filtering and disk encryption.

Includes DLP that lets you control the movement of sensitive information.

Provides device control so you can easily set rules for using removable storage devices.

Minimizes the impact on computer performance with our single scanning engine that independent tests rate as the fastest of any major security vendor.

Email: Stops spam, phishing, malware and data loss

Stopping unwanted and malicious email from getting into your inbox while preventing confidential information from leaking out is simple.

Our software stops inbound threats, including spam, phishing attacks, spyware and malware, quickly and effectively.

Protects sensitive data with automatic email encryption and pre-packaged DLP definitions—reducing your risk of data loss.

Simple wizards give you the control you need without complexity.

Mobile: Securely enable BYOD

Our Mobile Device Management (MDM) makes secure access to corporate email and data from smartphones and tablets easy.

Full policy control for iPhones, iPads, Android devices, BlackBerry, and Windows Mobile devices.

Prevent data loss with policies for auto locking, strong passcodes, and the ability to track, lock or wipe a lost or stolen device.

Manage apps with your own enterprise app store and the ability to block unwanted apps.

Exchange: Antivirus and anti-spam for your Microsoft Exchange servers

Bolster your secure email gateway with protection for your Microsoft Exchange servers. Stop spam, viruses and inappropriate content from potentially circulating within your organization.

UNIX: Antivirus and anti-spam for your UNIX servers

Carrier-grade message security that's built around an open architecture. It's advanced threat and spam protection that's scalable, versatile, highly customizable and extremely dependable.

Endpoint Protection for Windows, Mac, Linux, UNIX and virtualized platforms—all from one console.

The screenshot displays the Sophos Enterprise Console interface. At the top, there's a navigation bar with options like File, Edit, View, Actions, Groups, Policies, Events, Subscriptions, Tools, and Help. Below this is a dashboard with several key metrics:

- Computers:** A summary table showing counts for Managed (897), Unmanaged (1), Connected (896), Encrypted (1), and All (898).
- Computers with alerts:** A table showing alert counts for Viruses/spyware (5), Suspicious behavior/files (8), and Adware and PUA (7).
- Updates:** A section indicating the last update on Friday, October 28, 2011, 7:31 AM.
- Computers over event threshold:** A section with checkboxes for Device control and Application control.
- Errors:** A section with checkboxes for Data control and Firewall.

Below the dashboard is a tree view of Groups (Win2008R2SR264, Unassigned, AD Import, Desktops and Laptops (Live), Servers (Live), Virtual Desktops, Virtual Servers) and a list of Policies (Updating, Anti-virus and HIPS, Firewall, NAC, Application control, Data control, Device control, Full disk encryption, Encrypt all volumes, Encrypt boot volumes, Encrypt non-boot volumes, Encryption disabled). The main area shows a list of computers with columns for Computer name, Status, Policy compliance, Update Details, Alert and Error Details, Antivirus Details, Firewall Details, NAC Details, Application Control, Data Control, and Device Control.

Better together

The security included in our Enduser Data Suite works together to deliver better data and threat protection, greater visibility and ease of use.

- Deploy and manage your full-disk encryption from the same console you use to manage your antivirus.
- Consistent DLP policies across all enforcement points with easy sharing of custom sensitive-data definitions between endpoint and email.
- Anti-malware, HIPS, device and application control, web filtering and DLP all in one agent and managed by one console.
- Eliminate data loss risks from mobile devices with the ability to track, lock or wipe lost or stolen devices, all with a single license.
- One anti-malware engine across all platforms and points including desktops, laptops and Exchange servers, as well as the email gateway.
- Our SophosLabs analysts constantly monitor and fine-tune detection for you—delivering new data protection policies, keeping an eye on applications and websites to avoid, emerging threats, spam, and more.
- One vendor to call for 24-hour, certified expert support and one-to-one assistance.

Software components

Sophos Encryption

Integrated full-disk encryption includes secure pre-boot authentication and a full set of password and machine recovery tools.

Sophos Enterprise Console

A single, automated console for Windows, Mac, UNIX, Linux and virtualized platforms centrally deploys and manages antivirus and client firewall protection; intrusion prevention; endpoint web protection; patch assessment; encryption; data, device and application control; and endpoint assessment and control.

Sophos Endpoint Security (antivirus, HIPS, device control, application control and DLP)

A single endpoint agent for Windows detects viruses, spyware and adware, rootkits and suspicious files and behavior. It monitors the transfer of sensitive data off the network and blocks malicious and inappropriate websites. The agent also controls use of removable storage devices and unauthorized applications across multiple platforms.

Scans and identifies computers missing critical patches for vulnerabilities commonly targeted by threats. Centrally managed client firewall designed for the enterprise blocks worms, stops hackers, and prevents intrusions.

Sophos Email Protection with SPX Encryption

Your choice of Sophos Email Appliances (additional charge) or Virtual Email Appliances (no charge) with SPX Encryption. Our Email Appliances are the ultimate one-stop-shop for email encryption, DLP, antivirus, anti-spam and anti-phishing at your mail gateway.

Sophos PureMessage for Microsoft Exchange and UNIX

Antivirus and anti-spam protection for Microsoft Exchange and UNIX servers.

Sophos Web Filtering in Endpoint

Web policy enforcement for inappropriate sites.

Sophos Antivirus for Mac, Linux, UNIX, NetWare and OpenVMS

Antivirus protection for Mac, Linux and UNIX, NetWare and OpenVMS computers.

Sophos Mobile Control

Complete Mobile Device Management for iOS, Android, BlackBerry, and Windows Mobile that provides full control over security policy, lost or stolen device controls, enforcement and remediation options, and app management.
